→ Doubly linked list

A DLL is a type of linked list in which each node contains three parts:

1. Data → the actual data.
2. prev → a reference to the previous node.
3. next → a reference to the next node.

```
public static class Node {
        int data;
        Node next;
        Node prev;

        public Node(int data) {
                this.data = data;
                this.next = null;
                this.prev = null;
        }
}
```

→ Add node at beginning

```
public void addFirst(int data) {
        Node newNode = new Node(data);
        size++;

        if(head == null) {
                head = tail = newNode;
                return;
        }

        newNode.next = head;
        head.prev = newNode;
        head = newNode;
}
```

→ Doubly linked list

A DLL is a type of linked list in which each node contains three parts:

1. Data → the actual data.
2. prev → a reference to the previous node.
3. next → a reference to the next node.

```
public static class Node {
        int data;
        Node next;
        Node prev;

        public Node(int data) {
                this.data = data;
                this.next = null;
                this.prev = null;
        }
}
```

→ Add node at beginning

```
public void addFirst(int data) {
        Node newNode = new Node(data);
        size++;

        if(head == null) {
                head = tail = newNode;
                return;
        }

        newNode.next = head;
        head.prev = newNode;
        head = newNode;
}
```

→ Add node at end

```
public void addLast(){
    Node newNode = new Node(data);
    size++;

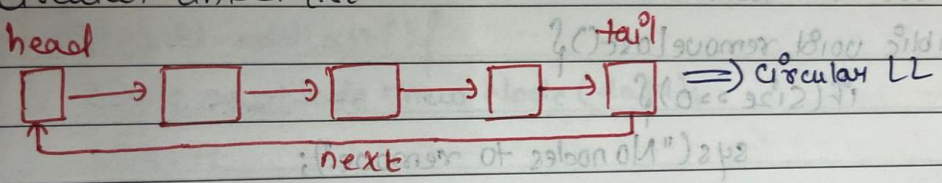
    if(head == null){
        head = tail = newNode;
        return;
    }
    tail.next = newNode;
    newNode.prev = tail;
    tail = newNode;
}
```

→ Remove node from beginning

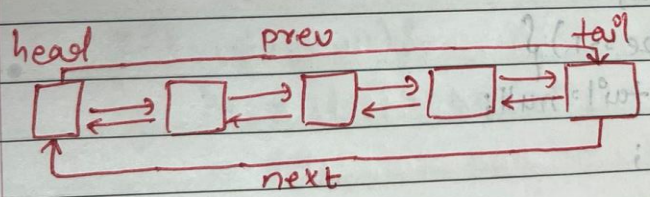
```
public void removeFirst(){
    if(size == 0){
        sys("No nodes to remove");
        return;
    } else if(size == 1){
        head = null;
        tail = null;
        size--;
        return;
    }

    head = head.next;
    head.prev = null
    size--;
}
```

→ Circular linked list



⟹ Circular LL



⟹ Doubly LL
